Astronomy 601 - Fall 2009  
“Radiative Processes”

Instructor

Prof. Massimo Ricotti  
Office: CSS 0213  
E-mail: ricotti@astro.umd.edu  
Phone: (301) 405 5097  
Office hours: by appointment  

Schedule

Lectures on Tuesday and Thursday from 12:30pm to 1:45pm  
Room CSS 0201

Course Description

Textbooks

Required: The Physics of Astrophysics Volume I: Radiation by F.H. Shu  
Recommended: Radiative Processes in Astrophysics by G. Rybicki and A. Lightman

Course Grading

<tbody>
<tr>
<td>Homework</td>
<td>50%</td>
</tr>
<tr>
<td>Midterm Exam</td>
<td>20%</td>
</tr>
<tr>
<td>Final Exam</td>
<td>30%</td>
</tr>
</tbody>
</table>

There will be one in-class Midterm exam and an in-class Final (the dates of the exams are shown below in the “Tentative course outline” section). Class participation is strongly encouraged. Class attendance is instead required. Homework will be assigned every week or every other week. Their due dates will be announced at the time they are assigned. On the due date the students will be expected to turn in their homework in class. The homework turned in will be graded and returned to the students. I will provide solutions and discuss them in class.
Letter Grades

85%-100% A
70%-85% B
55%-70% C
40%-55% D

I may rescale the grades depending on the average class performance. Of course the rescaling can only increase your final grade.

Course Evaluation

Your participation in the evaluation of courses through CourseEvalUM is a responsibility you hold as a student member of our academic community. Your feedback is confidential and important to the improvement of teaching and learning at the University as well as to the tenure and promotion process. CourseEvalUM will be open for you to complete your evaluations for fall semester courses between Tuesday, December 1 and Sunday, December 13. Please go directly to the website (www.courseevalum.umd.edu) to complete your evaluations starting December 1. By completing all of your evaluations each semester, you will have the privilege of accessing online, at Testudo, the evaluation reports for the thousands of courses for which 70% or more students submitted their evaluations.

Tentative Course Outline - 28 lectures & 2 exams

A. Radiative transfer - 6 lectures

1. **Tu Sept 1**: Radiation definitions; specific intensity, photon distribution function, occupation number, energy density, flux, momentum flux, radiation pressure (Shu Ch. 1; R-L § 1.1-1.3)

2. **Th Sept 3**: Equation of radiative transfer; emissivity and opacity, blackbody radiation, radiation thermodynamics, Stefan-Boltzmann law (Shu Ch. 1; R-L § 1.4-1.5)

3. **Tu Sept 8**: Bose Einstein statistics; Planck spectrum; Rayleigh-Jeans and Wien limits, radiation constant, effective temperature, color temperature and brightness temperature (Shu Ch. 1,2; R-L § 1.5)

4. **Th Sept 10**: Moment equations; radiative diffusion approximation, Rosseland mean opacity, scattering and random walks (Shu Ch. 2; R-L § 1.7-1.8)

5. **Tu Sept. 15** : General solution of radiative transfer equation, source function, optically-thick and -thin limits, LTE, line formation, absorption and emission spectra, limb darkening (Shu Ch. 3; R-L § 1.4)

6. **Th Sept. 17**: Plane-parallel atmospheres: radiative equilibrium, grey opacity, Eddington approximation (Shu Ch. 4; R-L § 1.8)

B. Statistical Mechanics of matter and radiation - 5 lectures

1. **Tu Sept 22**: Statistical mechanics, definitions of entropy, temperature, chemical potential, pressure, grand canonical partition function (Gibbs sum), Thermodynam-
ics: thermodynamic identity, grand potential, entropy (Shu Ch. 6; R-L § 1.5)

2. **Th Sept 24**: Quantum statistical mechanics: Fermion and Boson partition functions, grand potentials, occupation numbers (Shu Ch. 6; R-L § 1.5)

3. **Tu Sept 29**: Statistical equilibria: reaction equilibrium, Boltzmann law for internal level populations, Saha equation for ionization state populations, free particle partition functions, application to partial ionization and absorption line strengths (Shu Ch. 7; R-L § 9.5)

4. **Th Oct 1**: Rate equations and detailed balance, Einstein A and B coefficients, relations to emissivity, absorption opacity, cross-section, oscillator strength (Shu Ch. 8; R-L § 1.6)

5. **Tu Oct 6**: Collisional processes: rate coefficients, Einstein relations, radiation transfer in moving media, Sobolev (LVG) approximation, thick and thin limits, photon trapping and escape probability (Shu Ch. 9)

---

**C. Classical Electrodynamics - 7 lectures**

1. **Th Oct 8**: Maxwell equations, vacuum electromagnetic wave equations, plane parallel waves, EM energy and momentum flux [Poynting vector and Maxwell stress tensor] (Shu Ch. 11; R-L § 2.1-2.2)

2. **Tu Oct 13**: Fourier spectra of radiation, elliptically polarized waves (Shu Ch. 12; R-L § 2.3-2.4)

3. **Th Oct 15**: Midterm exam

4. **Tu Oct 20**: Stokes parameters and polarization, application to dust polarization (Shu Ch. 12; R-L § 2.4)

5. **Th Oct 22**: EM wave equation with sources, scalar and vector potentials, gauge transformations, retarded potentials (Shu Ch. 13; R-L § 2.5)

6. **Tu Oct 27**: Green’s function solutions for inhomogeneous wave equations, single particle (Lienard-Wiechert) retarded potential (Shu Ch. 13; R-L § 3.1-3.2)

7. **Th Oct 29**: Wave zone, electric dipole radiation, radiation reaction, Thomson scattering Rayleigh scattering (Shu Ch. 14; R-L § 3.3-3.6)

8. **Tu Nov 3**: Multipole radiation: magnetic dipole, electric quadrupole, permitted and forbidden transitions (Shu Ch. 15; R-L Ch. 5)

---

**D. Plasma radiation and transfer - 5 lectures**

1. **Th Nov 5**: Thermal Bremsstrahlung (Shu Ch. 15; R-L Ch. 5)

2. **Tu Nov 10**: Compton scattering (R-L Ch. 7)

3. **Th Nov 12**: Radiation from relativistic charges (Shu Ch. 16, 17; R-L Ch. 4)

4. **Tu Nov 17**: Synchrotron radiation (Shu Ch. 18, 19; R-L Ch. 6)

5. **Th Nov 19**: EM waves in plasmas, dispersion, Faraday rotation (Shu Ch. 20; R-L Ch. 8)

6. **Tu Nov 24**: Electromagnetic Hamiltonian (Shu Ch. 21; R-L § 10.1)
E. Atomic and molecular structure and radiation (QED) - 5 lectures

1. **Th Nov 26**: Thanksgiving holiday

2. **Tu Dec 1**: Semiclassical theory of radiative transitions: quantum matter/radiation interaction Hamiltonian, theory vector potential, $\mathbf{E}$ and $\mathbf{B}$ fields, semiclassical radiation energy density, absorption and emission Hamiltonians (Shu Ch. 22; R-L § 10.1)

3. **Th Dec 3**: Time dependent perturbation theory, propagator, one and two photons transitions, transition probabilities and rates for absorption/emission [Fermi’s golden rule] (Shu Ch. 22; R-L § 10.1)

4. **Tu Dec 8**: Dipole approximation, bound-bound transition rates and cross-sections, oscillator strengths, matrix elements, Einstein A and B coefficients for bound-bound transitions (Shu Ch. 23; R-L § 10.2, 10.3, 10.5)

5. **Th Dec 10**: Bound-free transitions in the Born approximation, photoionization and recombination rates and cross-sections, Einstein-Milne relations, line width and natural broadening (Shu Ch. 23; R-L § 10.5, 10.6)

6. **Friday Dec 18 (1:30pm-3:30pm)**: Final exam
