

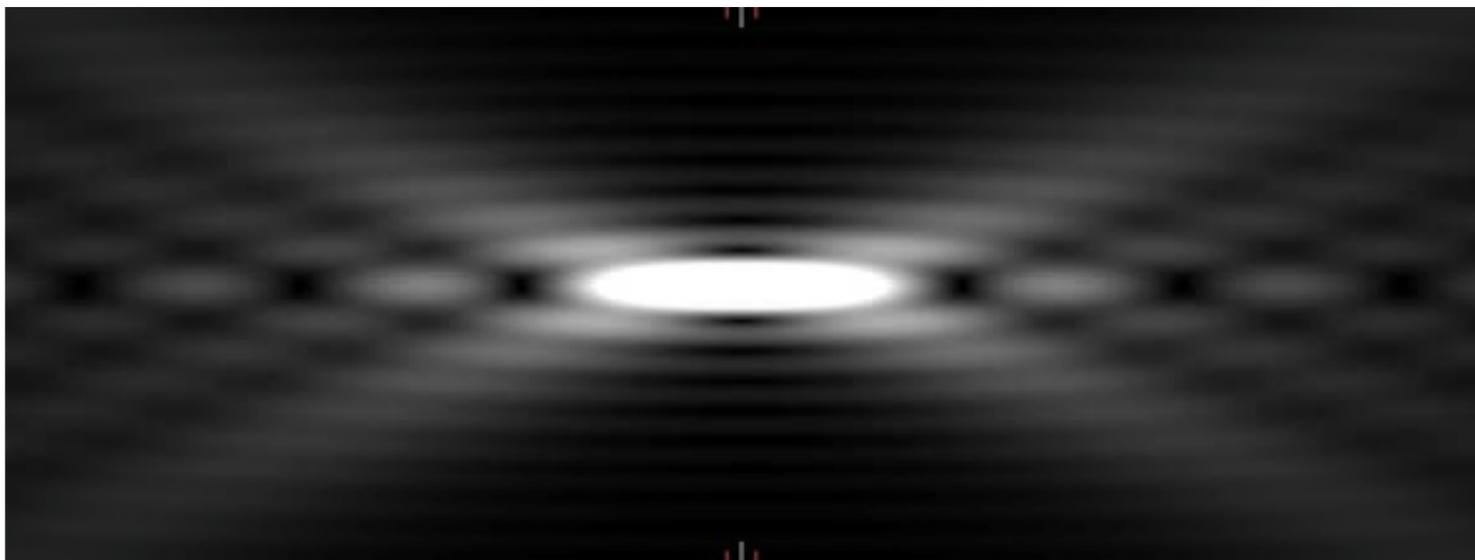

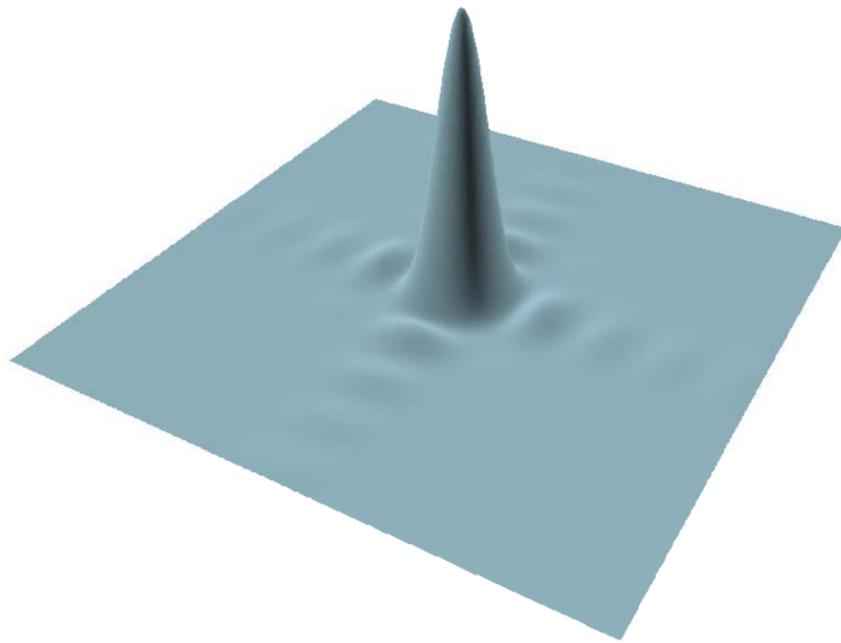

Fig. 8.41. Isophotes [contour lines of the intensity  $I(u, v)$ ] in a meridional plane near focus of a converging spherical wave diffracted at a circular aperture. The intensity is normalized to unity at focus. The dotted lines represent the boundary of the geometrical shadow. When the figure is rotated about the  $u$ -axis, the minima on the  $v$ -axis generate the AIRY dark rings.
